

Most corporations neglect the missing piece in the middle. When formulating strategy, there is an impatience in executing that strategy without first developing it. When you jump from formulation to execution you neglect the key fact which is that it should go from formulation to development – then execution. Development is an important detail because this is where innovation takes place. Companies that try to jump this stage don't benefit from innovative processes. Too often it is a rehash of what has been done before so they don't benefit from the presence of new ideas, new initiatives and thinking differently about markets.

This has to be appreciated because research into product cycles shows them to be increasingly rapid. Previously, product cycles would run two or three years. Now they run two or three months. So engaging the market with them and getting feedback is necessary.

The research suggests that of all the new products going into the market each year, more than 68% of them will be taken off the market within 18 months.

大多數企業的致命傷，是忽略了中間的關鍵部分。制定策略時，企業往往急於實施策略，卻沒有發展策略。從制定策略直接跳到執行策略，就忽略了發展策略這一關鍵階段。發展策略的重要性，在於這正是實行創新的階段。如企業忽略了發展策略這階段，則無法享受創新過程中獲得的成果。若企業只重新調整從前的計劃，便無法以新思維、新計劃及角度審視市場。

這是極為重要的，因為研究顯示，產品週期正變得愈來愈急速。從前，產品週期可持續兩三年，現在是兩三個月。因此，與市場接軌並獲得回饋是有必要的。

研究亦顯示，每年進入市場的新產品中，有68%以上的產品在18個月就黯然離場。
