

On China's economy and its future

論中國經濟及其前景

How would you characterize the Chinese economy?

As it is unfolding, clearly the economy is in a major transition. With double digit growth for decades, the economy is moving from a hyper emerging economy to strategic positioning in the global economic landscape with a comfortable GDP somewhere within the 6% to 8% range.

Further, in order to sustain global growth, the Central Government saw a compelling necessity to engage in a disciplined effort to align the leadership and management of both SOE's and corporate China through principled leadership and ethical management practices.

Understandably, this has caused the highlighting of gaps in management processes, facilitation methods and leadership practices. Today, the consequences of significant corruption are challenging where past practices can no longer be the modus operandi for leaders in both facilitating business growth and expansion. The new generation has to adopt principled and ethical leadership practices. And it has to be deeply rooted in one's consciousness because under the present leadership of China, this is obviously not an invitation but more of a demand.

你認為中國經濟有何特徵？

中國經濟顯然處於關鍵的轉型階段。經歷了數十年的每年雙位數增長後，中國經濟從新興經濟體系高速增長階段，至今在全球經濟版圖中立下一個策略性定位，而國內生產總值則維持在每年6%至8%的健康水平。

與此同時，為了維持全球經濟增長，中央政府明白必須通過合乎道德倫理的領導管理方法及有紀律的方式，整治國有企業與中國企業的管理措施。

這樣一來，中國在管理過程、促進發展和領導管理方式的弊端，便開始為人們所注視。現在，我們明白到貪污問題的嚴重後果，領導者已不能再以舊有作風和慣常做法去推動經濟發展。新一代領導者須採取合乎道德倫理的領導管理方式。這需要由心而發地進行，因為在中國當前的領導管理生態中，革新顯然不是選擇，而是必須的。

What can you say about China and its environment?

There are possibly billions of opinions on how China is doing with the economy and its environmental agenda, from human rights to labour unrest. It has been the whipping boy of foreign leaders in their campaign platforms this year but despite perpetual negative assaults, China's economy has still performed well compared to other leading nations who's GDP has struggled to reach even 3%. And as chill winds blow across all of Asia, these challenges for China are not trivial but mammoth in scope and consequence.

Whilst many who travel to Beijing and Shanghai realize and have become conditioned to the perpetual smog, pollution and dark skies above, a government urbanization plan unfolded earlier this year and this strategy aims to ultimately increase the residential and commercial density, reducing commuting distance and accommodating the endless millions of people moving to the cities each year.

It's a race against time in order to reduce pollution and prepare to accommodate an expected 100 million-plus people moving into the country's cities by 2020. The greatest migration on planet earth will undoubtedly continue.

你如何看待中國及其環境問題？

針對中國經濟、環境、人權及勞工紛爭等議題而發表的意見，數目猶如恒河沙數。不少國家的政府正值大選年，無不就上述議題對中國大肆抨擊。儘管批評聲音不斷，但是與其它先進國家勉強取得的3%經濟增長率相比，中國經濟依然表現良好。寒風席捲亞洲各地時，這些挑戰對中國絕非無足輕重，而是會帶來引致嚴重後果的深廣影響。

當不少前往北京及上海的旅客，對城市上空連年不斷的霧霾及污染習以為常之時，政府就於本年初推出新的城市化計劃，力圖提高住宅及商業密度、減低兩者距離，並為每年數以百萬從鄉村移居城市的人口提供安身之所。

減低污染、為2020年前從鄉村移居城市的1億人口提供安身之所，已刻不容緩。這地球上規模最大的移民潮，無疑會繼續下去。
