

“

My teaching is based on the theory of the subject matter but also the applied practical experience of my work.

我的教學重視理論及應用本人工作的實際經驗。

”

BB: Is that why you continue to study to this day?

BT: Yes because the more you know, or think you know, the more you realize that you don't actually know much at all. It's this whole notion of enquiry.

When you're teaching Nobel Prize winners and national scholars and the best brains in the world at the best schools, that's a pretty good way to realize how much more there is to know. And that's not false modesty, it's true – I still go to some classes and have no clue what they are talking about!

So that is reinforcement of what you don't know. When you have a modest amount of diverse clients who are paying you good money, you owe it to them to not only be able to keep up but to be a valuable contributor to your clients.

Think about it in the context of medicine. Do you really want your brain operation from someone that earned their degree many, many years ago and has done a couple of online courses since or do you want to know that your surgeon is really employing state of the art technology? Of course you want the very best!

If you have a patient on the table and you must execute a corporate operation, who do you really want to operate on you? The only way is to not only study regularly and with a passion but also to practice the very latest theories and methods.

本思齊：這是你至今一直學習的原因嗎？

Brian To博士：是的。當一個人知道得愈多，或認為自己知道得愈多時，才發覺自己知道的其實很少。這就是研究探索的核心。

在著名學府教導諾貝爾獎得主、各國頂級學者及全球精英時，讓人明白到自己要學習的還有很多！這不是客氣話，而是真確的——有時候，我出席某些課程時，還真的不知道他們在談甚麼！

這有助於找出知識的盲點。當你有一定數量、來自不同背景的客戶向你支付學費時，你的責任就不限於與他們接軌，而更需要為他們提供寶貴意見。

以醫學為例，如果要接受腦部手術，你會選擇一位畢業多年，後來完成了幾個遙距課程的醫生，還是一個真正採用最先進技術的醫生？選擇最好的，是人之常情。

如果躺在手術床上的病人是一家企業，你希望誰來操刀？唯一的選擇，就是專心致志地學習，並應用最新的理論及方法。
